

Weekly Petroleum Status Report

Data for Week Ended:
April 5, 1985

Published:
April 11, 1985

The Weekly Petroleum Status Report (WPSR) provides timely information on the petroleum supply situation in the context of historical information, selected prices, and forecasts. The WPSR is intended to provide up-to-date information to the industry, the press, planners, policymakers, consumers, analysts, and State and local governments. It is published each Thursday by the Energy Information Administration. The data contained in this report are based on company submissions for the week ending 7 a.m. the preceding Friday.

This publication is available on an annual subscription basis from the Superintendent of Documents, U.S. Government Printing Office (GPO). Ordering information and purchase of this and other Energy Information Administration (EIA) publications may be obtained from the GPO or the EIA's National Energy Information Center (NEIC).

Questions on energy statistics should be addressed to the NEIC. Addresses and telephone numbers appear below.

HIGHLIGHTS

Refinery Activity

Crude oil input to refineries averaged 11.4 million barrels per day for the four weeks ending April 5, 1985. Refinery capacity utilization averaged 75.1 percent during the period. During the four weeks ending April 5, 1985, motor gasoline production averaged 6.0 million barrels per day and distillate fuel oil production averaged 2.3 million barrels per day.

Stocks

On April 5, 1985, stocks of crude oil (excluding the Strategic Petroleum Reserve) stood at 323.2 million barrels, about 4 percent below the level one year ago. Stocks of total motor gasoline, at 216.8 million barrels, were about 11 percent below the level one year ago. Distillate fuel oil stocks stood at 98.2 million barrels, about 9 percent below the level one year ago. Stocks of residual fuel oil stood at 45.4 million barrels, about 5 percent below the level one year ago.

Imports

Net imports of crude oil (including imports for the Strategic Petroleum Reserve) and petroleum products together averaged 3.8 million barrels per day for the four weeks ending April 5, 1985, about 14 percent below the average a year ago. Gross imports of crude oil (excluding the Strategic Petroleum Reserve) averaged 3.1 million barrels per day for the four-week period ending April 5, 1985.

Products Supplied

Total petroleum products supplied averaged 15.3 million barrels per day for the four-week period ending April 5, 1985, which is about 4 percent below the rate supplied a year ago. Motor gasoline was supplied at a rate of 6.5 million barrels per day, which is about 1 percent below the rate supplied a year ago. Distillate fuel oil was supplied at a rate of 3.0 million barrels per day, about 6 percent below the rate supplied a year ago.

World Crude Oil Price

Two major oil suppliers announced price reductions last week:

- o a decrease in the British National Oil Corporation (BNOC) official purchasing price of Brent Blend by \$1.15 to \$27.50 a barrel, effective April 1.
- o a decrease in the official price of Malaysia's Miri crude oil by \$1.90 to \$27.95, retroactive to February 1.

As a result of the price changes noted above, the weighted-average international price of crude oil as of April 9, 1985, is estimated to be \$27.79 a barrel.

Spot Market Product Prices

For the week ending April 5, 1985, the average spot market price of 98 octane gasoline on the Rotterdam market increased \$1.35 to \$31.94 a barrel; the gasoil price decreased 40 cents to \$32.10 a barrel, and the price of residual fuel oil increased 7 cents to \$25.37 a barrel.

On the New York market, the average spot price of 89 octane regular gasoline increased 94 cents to \$34.65 a barrel; the price of No. 2 heating oil decreased \$1.26 to \$34.13 a barrel, and the price of residual fuel oil decreased 10 cents to \$26.65 a barrel.

E=Estimate based on monthly data.

¹ Includes lease condensate.² Net Imports = Gross Imports (line 3) + SPR Imports (line 4) - Exports (line 5).³ Includes finished petroleum products, unfinished oils, gasoline blending components, and natural gas plant liquids for processing.⁴ Includes an estimate of minor product stock change based on monthly data.⁵ Includes crude oil product supplied, natural gas liquids, liquefied refinery gases, other liquids, and all finished petroleum products except motor gasoline, jet fuels, and distillate and residual fuel oils.⁶ Includes crude oil in transit to refineries.⁷ Included are stocks of all other oils such as aviation gasoline, kerosene, natural gas liquids (including ethane), aviation gasoline blending components, naphtha and other oils for petrochemical feedstock use, special naphthas, lube oils, wax, coke, asphalt, road oil, and miscellaneous oils.

For the current two weeks, stocks of these minor products are estimated from monthly data. (See Glossary: Stock Change (Refined Products)).

Note: Due to independent rounding, individual product detail may not add to total. The percentages shown are calculated using unrounded numbers.

¹E=Estimated. See Glossary for definition of "Stock Change (Refined Products)" for explanation of other oils methodology.

stocks include those stocks held at refineries, in pipelines, and at major bulk terminals. Stocks at gas processing plants are included in "Other Oils" and in totals. All stock levels are as of

include those stocks held at refineries, in pipelines, in lease tanks, and in transit include those held in the Strategic Petroleum Reserve.

³All other oils such as aviation gasoline, kerosene, natural gas liquids (including blending components, naphtha and other oils for petrochemical feedstock use, special asphalt, road oil, and miscellaneous oils.

⁴all due to independent rounding.
publication.

Stocks

Crude Oil and Petroleum Products, U.S. Total¹
(Million Barrels)

Crude Oil, U.S. Total¹
(Million Barrels)

¹ Excludes stocks held in the Strategic Petroleum Reserve and includes crude oil in transit to refineries.

² Average level, width of average range, and observed minimum are based on three years of monthly data: July 1981–June 1984. The seasonal pattern is based on seven years of monthly data. See Appendix B for further explanation.

³ The observed minimum for total stocks in the last three-year period, July 1981–June 1984, was 1045.6 million barrels. It occurred in January 1984. See Appendix B for further explanation.

⁴ The National Petroleum Council (NPC) defines the Minimum Operating Inventory as the inventory level below which operating problems and shortages would begin to appear in a defined distribution system. In its 1983 study, the NPC estimated this inventory level for crude oil to be 285 million barrels. See Appendix B for further explanation.

¹ Includes exports of crude oil and refined petroleum products. Exports of crude oil are prohibited under normal circumstances. Some crude oil is shipped to Canada in exchange on a barrel-for-barrel basis. Shipments of crude oil to Puerto Rico and the Virgin Islands are not prohibited because these territories are U.S. possessions.

² Includes imports of kerosene, unfinished oils, motor gasoline blending components, liquefied petroleum gases and other oils.

Note: Detail data may not add to total due to independent rounding.

WEATHER SUMMARY
(Population Weighted Heating Degree Days¹)

Weather data reported in the Weekly Petroleum Status Report are now taken directly from a computerized system implemented by the National Oceanic and Atmospheric Administration, Department of Commerce.

The weather for the nation, as measured by population-weighted heating degree-days from July 1, 1984 through April 6, 1985, has been 2 percent warmer than normal and 5 percent warmer than last year.

U.S. TOTAL HEATING DEGREE DAYS (Population Weighted) and by CITY

EIA WEEKLY DATA: SURVEY DESIGN AND ESTIMATION METHODS

The Weekly Petroleum Reporting System (WPRS) comprises six surveys: the "Weekly Refinery Report" (EIA-800); the "Weekly Bulk Terminal Report" (EIA-801); the "Weekly Product Pipeline Report" (EIA-802); the "Weekly Crude Oil Stocks Report" (EIA-803); the "Weekly Imports Report" (EIA-804); and the "Weekly Shipments from Puerto Rico to the United States Report" (EIA-805). The EIA weekly reporting system, as part of the Petroleum Supply Reporting System, was designed to collect data similar to those collected monthly. In the WPRS, selected petroleum companies report weekly data to EIA on crude oil and petroleum product stocks, refinery inputs and production, and crude oil and petroleum product imports. On the Forms EIA-800 through EIA-803, companies report data on a custody basis. On the Form EIA-804 and EIA-805, the importer of record reports each shipment entering the United States. Current weekly data and the most recent monthly data are used to estimate the published weekly totals.

Sample Frame

The sample of companies that report weekly in the WPRS was selected from the universe of companies that report monthly. All sampled companies report data only for facilities in the 50 States and the District of Columbia. The EIA-800 sample frame includes all petroleum refineries in the United States and its territories, industrial facilities that have crude oil distillation capacity and produce some refined petroleum products, and bulk terminals that blend motor gasoline. The EIA-801 sample frame includes all bulk terminal facilities in the United States and its territories that have total bulk storage capacity of 50,000 barrels or more, or that receive petroleum products by tanker, barge, or pipeline. The EIA-802 sample frame includes all petroleum product pipeline companies in the United States and its territories that transport refined petroleum products, including interstate, intrastate, and intracompany pipeline movements. Pipeline companies that transport only natural gas liquids are not included in the EIA-802 frame. Only those pipeline companies which transport products covered in the weekly survey are included. The EIA-803 sample frame consists of all companies which carry or store crude oil of 1,000 barrels or more. Included are gathering and trunk pipeline companies (including interstate, intrastate and intracompany pipelines), crude oil producers, terminal operators, storers of crude oil, and companies transporting Alaskan crude oil by water. The EIA-804 sample frame includes all importers of record of crude oil and petroleum products into the United States. The EIA-805 sample frame includes all shippers of petroleum products into the United States from Puerto Rico.

Sampling

The sampling procedure used for the weekly system is the cut-off method. In the cut-off method, companies are ranked from largest to smallest on the basis of the quantities reported during some previous period. Companies are chosen for the sample beginning with the largest and adding companies until the total sample covers about 90 percent of the total for each item and each geographic region for which weekly data are published. The EIA-805 is a census of all shippers of petroleum products from Puerto Rico.

	Refiners (Refineries)	Bulk Terminals	Product Pipelines	Crude Oil Stock Holders	Importers	Shippers From PR
Weekly Form	EIA-800	EIA-801	EIA-802	EIA-803	EIA-804	EIA-805
Monthly Frame Size	152(256)	318	89	181	1208	3
Weekly Sample Size	60(154)	79	48	86	70	3

Collection Methods

Data are collected by mail, mailgram, telephone, Telex, and Telefax on a weekly basis. All canvassed firms must file by 5:00 p.m. on the Monday following the close of the report week, 7 a.m. Friday. During the processing week, company corrections of the prior week's data are also entered.

Estimation and Imputation

After the company reports have been checked and entered into the weekly data base, explicit imputation is done for companies which have not yet responded. The imputed values are exponentially smoothed means of recent weekly reported values for this specific company. The imputed values are treated like reported values in the estimation procedure, which calculates ratio estimates of the weekly totals. First, the current week's data for a given product reported by companies in a geographic region are summed. (Call this weekly sum, W_t). Next, the most recent month's data for the product reported by those same companies are summed. (Call this monthly sum, M_s). Finally, let M_t be the sum of most recent month's data for the product as reported by all companies. Then, the current week's ratio estimate for that product for all companies, W_t , is given by:

$$W_t = \frac{M_t}{M_s} \cdot W_s$$

This procedure is used directly to estimate total weekly inputs to refineries and production. To estimate stocks of finished products, the preceding procedure is followed separately for refineries, bulk terminals, and pipelines. Total estimates are formed by summing over establishment types. Shipments from Puerto Rico are considered imports for estimation purposes.

Weekly imports data are highly variable on a company-by-company basis or a week-by-week basis. Therefore, an exponentially smoothed ratio has been developed. The estimate of total weekly imports is the product of the smoothed ratio and the sum of the weekly reported values and imputed values. Imports of other oils include an adjustment from Census data for unlicensed products because of coverage differences between the monthly imports data and Census data.

Response Rates

Response rate as of the day after the filing deadline is about 80 percent for the EIA-800; 75 percent for the EIA-801; 95 percent for the EIA-802; 80 percent for the EIA-803; greater than 95 percent for the EIA-804 and 100 percent for the EIA-805. However, more forms are received the next day, bringing the final response rates up. Respondents are contacted by telephone. Nearly all of the major companies report on time. The nonresponse for the published estimates is usually between 2 percent and 5 percent.

Appendix B

INTERPRETATION AND DERIVATION OF AVERAGE INVENTORY LEVELS

Inventory (stocks) graphs for total petroleum products, crude oil, motor gasoline, distillate fuel oil, and residual fuel oil in this publication include features to assist in comparing current inventory levels with past inventory levels and with judgments of critical levels. Methods used in developing the average inventory levels and minimum operating levels are described below.

Average Inventory Levels

Charts displaying inventory levels of crude oil and petroleum products (p.7), crude oil (p.7), motor gasoline, distillate fuel oil (p.11), and residual fuel oil (p.13) provide the reader with actual inventory data reduced to an "average range" from the most recent 3-year period running from January through December or from January through June. The ranges are updated every six months in April and October. The 3-year period is adjusted by dropping the oldest 6 months and including the most recent 6 months. The ranges also reflect seasonal variation determined from a longer time period. The seasonal factors, which determine the shape of the upper and lower curves, are updated annually in October, using the most recent year's final monthly data.

Monthly seasonal factors are estimated by means of a seasonal adjustment technique developed at the Bureau of Economic Analysis (Census X-11). The seasonal factors are assumed to be stable (i.e., unchanging from year to year) and are derived (i.e., the series is deseasonalized by subtracting the seasonal factor for the appropriate month from the reported inventory levels). The intent of deseasonalization is to remove only annual variation from the series. Thus, deseasonalized series would contain the same trends, cyclical components, and irregularities as the original data. The seasonal factors for total petroleum (crude and products), crude oil, distillate fuel oil, residual fuel oil were derived using monthly data from 1977-1983. In 1977, monthly stock levels of motor gasoline stayed at the same high level for the entire year. Since there was virtually no seasonal behavior in motor gasoline stocks that year, data for 1978-1983 were used in the determination of seasonal patterns for motor gasoline stocks.

Seasonal factors are derived, data from the most recent 3-year period (January-December or July-June) are deseasonalized. The average of the deseasonalized 36-month series determines the midpoint of the deseasonalized range band. The standard deviation of the deseasonalized 36-months is calculated adjusting for extreme data points. The upper curve of the "average range" is defined as the average plus the seasonal factors plus the standard deviation. The lower curve is defined as the average plus the seasonal factors minus the standard deviation. Thus, the width of the "average range" is twice the standard deviation. The values of the upper and lower curves are presented in the table below.

Values of Average Ranges in Inventory Graphs
(Millions of Barrels)

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Lower Range												
Petroleum	1096.9	1064.8	1038.7	1039.8	1049.5	1062.3	1088.7	1104.8	1121.1	1129.8	1138.4	1115.0

Minimum Operating Inventories

Lines labeled "Minimum Operating Inventory" (MOI) on the stocks graphs for crude oil, motor gasoline, distillate fuel oil, and residual fuel oil represent estimates of those inventory levels made by the National Petroleum Council (NPC) and published in November 1983 in "Petroleum Inventories and Storage Capacity -- Annual Report." The NPC defines the MOI as the inventory level below which operating problems and shortages begin to appear in a defined distribution system. The NPC report presents the findings of a study which was conducted by the NPC's Committee on Petroleum Inventories and Storage Capacity. MOI estimates presented in

the report were developed by consensus through a decision-making process that relied on the judgement of Committee members based on their operating experience, on historical inventory trends, and on the results of an NPC survey of companies that provide primary inventory data to the Energy Information Administration. The estimated values are: Crude oil -- 285 million barrels; motor gasoline -- 200 million barrels; distillate fuel oil -- 105 million barrels; and residual fuel oil -- 40 million barrels.

The NPC did not develop a minimum operating inventory level for total petroleum stocks. The line labeled "observed minimum" on the "Stocks of Crude Oil and Petroleum Products, U.S. Total" graph is the lowest inventory level observed during the same 3-year base period that was used in the derivation of the average inventory levels shown on the graph.

Appendix C

PROJECTION FROM THE SHORT-TERM ENERGY OUTLOOK, JANUARY 1985

The projections of "high" and "low" total petroleum demand, shown in the WPSR as total product supplied, are from the Office of Energy Markets and End Use, Short-Term Energy Outlook (Outlook), January 1985. The three forecast cases presented in the Outlook for 1985 through mid-1986 are based on different assumptions about the growth of the U.S. economy and the associated price of imported crude oil to U.S. refiners.

In the high economic growth case:

- One year growth in the real Gross National Product (GNP) is projected to be 3.5 percent for 1985 and 4.1 percent for the first six months of 1986.
- U.S. refinery acquisition costs of imported crude oil are assumed to fall to an average of \$25.50 per barrel in 1985 and \$25.00 per barrel in 1986, in current dollars.

In the base case:

- One year growth in the GNP is projected to be 2.5 percent for 1985 and 2.9 percent for the first six months of 1986.
- U.S. refinery acquisition costs of imported crude oil are assumed to fall to an average of \$28.10 per barrel in 1985 and \$28.00 per barrel in 1986, in current dollars.

In the low economic growth case:

- One year GNP growth falls to 1.0 percent in 1985, then rises to 2.6 percent the first six months of 1986.
- U.S. refinery acquisition costs of imported crude oil are assumed to rise to an average of \$29.60 per barrel in 1985 and \$30.50 in the first six months of 1986, in current dollars.

The plots of the low and high product supplied estimates incorporate an additional sensitivity adjustment for changes in weather, and residential sector switching from oil, as estimated in the Short-Term Energy Outlook, Table 13.

For more detailed information on the above (and other components of the forecast), please refer to the published report, Short-Term Energy Outlook, January 1985.

Copies of the report are available from:

National Energy Information Center
Room 1F-048, Forrestal Building
1000 Independence Avenue, S.W.
Washington, D.C. 20585
Telephone 202-252-8800

- o **Product Supplied.** A value calculated for specific products which is equal to domestic production plus net imports (imports less exports), less the net increase in primary stocks. Total products supplied is calculated as inputs to refineries, plus estimated refinery gains, plus other hydrocarbon input, plus product imports, less product exports, less the net increase in product stocks. Values shown for "Other Oils" product supplied are the difference between total product supplied and product supplied values for specified products. Other oils product supplied incorporates crude oil product supplied and reclassified product adjustment.
- o **Refiner Acquisition Cost of Crude Oil.** The average price paid by refiners for crude oil booked into their refineries in accordance with accounting procedures generally accepted and consistently and historically applied by the refiners concerned. Domestic crude oil is that oil produced in the United States or from the outer continental shelf as defined in 43 USC Section 1131. Imported crude oil is any crude oil which is not domestic oil. The composite is the weighted average price of domestic and imported crude oil. Prices do not include the price of crude oil for the SPR.
- o **Refinery Capacity Utilization.** Ratio of the total amount of crude oil, unfinished oils, and natural gas plant liquids run through crude oil distillation units to the operable capacity of these units. In the period 1979-1982 the refinery capacity utilization for all U.S. refineries ranged between 87 percent and 65 percent. The ratio for an individual refinery may fluctuate much more depending on the type of crude and other raw materials processed, the types of products produced, and the operating conditions of the refinery.
- o **Residual Fuel Oils.** Includes No. 5 and No. 6 fuel oils which are heavy oils used primarily for electric power generation, for industrial and commercial space heating, as a ship fuel, and for various industrial uses.
- o **Retail Motor Gasoline Prices.** Motor gasoline prices calculated each month by the Bureau of Labor Statistics (BLS) in conjunction with the construction of the Consumer Price Index (CPI). These prices are collected in 85 urban areas selected to represent all urban consumers--about 80 percent of the total U.S. population. The service stations are selected initially, and on a replacement basis, in such a way that they represent the purchasing habits of the CPI population. Service stations in the current sample include those providing all types of service (i.e., full-, mini-, and self-service).
- o **Stock Change (Refined Products).** Component of Product Supplied calculation shown on U.S. Petroleum Balance. The product stock change shown on the U.S. Petroleum Balance Sheet for the current 4-week period is calculated in the following way; an average daily stock change is calculated for major refined products (i.e., all actual reported stocks); this stock change is added to an estimate for minor product stock change based on historical monthly data; a daily average stock change for refined product stocks for the 4-week period is then calculated. To calculate minor product stock change, the stock levels shown for other oils in the stock section of the balance sheet are used. These other oils stock levels are derived by: 1) computing an average daily rate of stock change for each month based on monthly data for the past six years; 2) using this daily rate and the minor stock levels from the most recent monthly publication to estimate the minor product stock level for the current period.
- o **Stocks.** For individual products in the WPSR, quantities held at refineries, in pipelines, and at bulk terminals which have a capacity of 50 thousand barrels or more, and in transit thereto. Stocks held by product retailers and resellers, as well as tertiary stocks held at the point of consumption, are excluded. Stocks of individual products held at gas processing plants are excluded from individual product estimates but included in "Other Oils" estimates and "Total."
- o **Unaccounted-for Crude Oil.** A term which appears in U.S. Petroleum Balance Sheet. It reconciles the difference between data (or estimates) about supply and data (or estimates) about disposition. Its value can be positive or negative since it is a balancing term. As it appears in the monthly publications, it reflects the accuracy of the reported data. Because the unaccounted-for crude oil figure reflects the accuracy of reported and estimated figures, one would expect the figure to be larger in balances using preliminary or estimated data and smaller in balances using final data. In fact, the published figures confirm this expectation. In the WPSR, four-week averages for the previous year are interpolated from final monthly data, so that the unaccounted-for crude oil value for the previous year is considerably smaller than that for the current period.
- o **United States.** For the purpose of the report, the 50 states and the District of Columbia. Data for the Virgin Islands, Puerto Rico, and other U.S. territories are not included in the U.S. Totals.

Energy Information Administration
Electronic Publication System (EPUB)
User Instructions

Selected Weekly Petroleum Status Report (WPSR) and Petroleum Supply Monthly (PSM) statistics are now available electronically on the Energy Information Administration (EIA) Computer Facility. Public access to these machine readable statistics is possible by dialing (202) 252-8658 for 300 baud or 1200 baud line speeds. Communications are Asynchronous and require a standard ASCII-type terminal. There is no charge for this service. Although there is not a required password, you will be requested to use your telephone number as a user identifier. This service is available on Wednesday (Thursday in the event of a Holiday) after 5 p.m. and will provide weekly data for the current week. Monthly data for the current available month is also provided. Questions or comments should be directed to T.C. Swann at (202) 252-1155.

Access Instructions:

- 1) DIAL (202) 252-8658
- 2) HIT RETURN (CARRIAGE RETURN) ONCE TO ESTABLISH BAUD RATE AND
TYPE "LOGON" TO LINK TO EIADIAL FOLLOWED BY A SECOND RETURN

LOGON

WELCOME TO THE
ENERGY INFORMATION ADMINISTRATION
ELECTRONIC PUBLICATION SYSTEM

- 3) SELECT THE STATISTICS YOU WISH FROM THE MENU

THE FOLLOWING REPORTS ARE AVAILABLE.
WPSR - WEEKLY PETROLEUM STATUS REPORT
PSMR - PETROLEUM SUPPLY MONTHLY
STKS - PSM STATE STOCKS TABLE
PLEASE ENTER THE DESIRED REPORT ID...
WPSR

- 4) ENTER YOUR 10 DIGIT PHONE NUMBER

\$WP1081 LOGON IN PROGRESS AT 13:23:22 ON MAY 9, 1984
PLEASE ENTER YOUR PHONE NUMBER...

- 5) YOU WILL THEN SEE A BANNER WHICH SHOWS THE REPORT YOU HAVE SELECTED AND PAUSES TO
ALLOW AMPLE TIME TO GET READY TO RECEIVE OUTPUT

YOU HAVE SELECTED WEEKLY STATISTICS FROM THE
WEEKLY PETROLEUM REPORTING SYSTEM. THIS
SYSTEM WILL DISPLAY THE LATEST U.S. PETROLEUM
BALANCE SHEET AND THE MOST RECENT 5 WEEKS OF
WEEKLY PETROLEUM STATUS REPORT DATA. PLEASE
TURN ON YOUR PRINTER NOW IF YOU WISH TO OBTAIN
HARD COPY OUTPUT.

(PRINTING WILL BEGIN IN 20 SECONDS)
